# Fluid Controls Awarded

## Innovative Industries Award 2021

Fluid Controls has been awarded **the Innovative Industries Award 2021** by the **Institution of Engineers (India**) at Engineering Excellence Award 2021 program held on 15 August 2021. The award recognizes the Fluid Controls R&D approach of constantly researching new developments and continuously developing innovative approaches.

From its inception in 1974, Fluid Controls has engaged in original R&D and has had an ethos of developing products which are indigenous replacements of imported products. Following a rigorous approach, all new products designs and innovations at Fluid Controls are based on specific client and application requirements. Adopting a "Design for Six Sigma" approach, all products designed by Fluid Controls Private Limited are developed from First Principles. Each design is 2D and 3D modeled and validated using the latest software and FEA. Since 2011, we have developed more than 25 new products, which is very much in line with the Fluid Controls vision statement.

Fluid Controls is approved as an “In-House R&D unit” by Department of Scientific & Industrial Research (DSIR), Government of India and also is the recipient of NABL certification for it’s state-of-the-art testing facilities. The Fluid Controls Rail & Metro business is System Certified for International Railway Industry Standard (IRIS) for Rail Application (ISO/TS 22163 :2017).
